

Efficient transport solutions

We offer:

Efficient transport systems

Transatlantic offers cost-efficient shipping transports through high competency, efficient systems and adapted tonnage. To keep pace with the changing needs of our clients we adapt and adjust our fleet. We have some 50 vessels at our disposal operated by our teams in Sweden. Through experience and competence our customers should be able to trust our ability to deliver services in terms of: Safety - no harm to people, cargo, ship and the environment | Time - always on time | Reliability - to meet our customers expectations | Environmental influence - with minimal impact on the environment.

Industrial shipping

RoRo

Our RoRo services operates mainly in the Baltic Sea and in parts of the Norths Sea. We carry all types of cargoes such as: rolling, unitized and general cargoes e.g. machinery parts, boats, containers, tanks, etc. A fleet of cassettes and roll-trailers with various measurements and capacity is used depending on the characteristics of the cargo.

RoRo vessels

- TransLumiLine Kemi – Oulu – Lübeck – Gothenburg
- TransBothniaLine Oulu - Kemi - Antwerp – Zeebrugge
- TransSuomiLine Kotka – Gothenburg
- Route61 Gävle-Rauma

Bulk

Our ice classed vessels can call at most ports, small or big, in our geographical field of activity. Our long-term contracts with customers within the forestry, mining and steel industries - and all their related businesses - helps us to set up efficient systems for our customers benefit. To optimise our business we are also active on the spot market. The customer gets flexible solutions from us by combining cargoes or by utilising the whole or parts of the vessels cargo space.

Bulk vessels 14.000-20.000 dwt

- Atlantic/USEC Pulp & Paper, Atlantic trade
- Large Bulk segment, Europe

Bulk vessels 4.000-7.000 dwt

- Short Sea Bulk segment, Europe

Container

We offer container-based liner traffic between the Mälardalen/Stockholm area to south of Sweden, the UK, Holland and Germany. The lines are served by modern container vessels with high ice classification, and several of them has built-in dehumidifier for transporting moisture-sensitive steel products. Through our "door to door" solutions, which can be read about on the next page, we create highly cost-effective solutions for our customers.

Container vessels 300-800 TEU's

- TransPal Line Västerås - Oxelösund – Norrköping - Åhus - Hull - Amsterdam
- TransFeeder South Västerås - Södertälje - Oxelösund – Åhus - Hamburg – Bremerhaven
- TransFeeder North Oulu – Tornio – Göteborg - Hamburg – Bremerhaven

Integrated Logistics

To increase our customers competitiveness we provide industrial shipping services or integrated logistics solution which could include shipping, terminal operation, warehousing and distribution. Our unique coordinated IT-system enables you to follow your goods with real-time status reports and delivery expectancy.

Our integrated logistics solutions are comparable to a One-stop shop where the customer has a single contact person. The person assumes responsibility in turn for the customer's entire logistical flow from shipment of raw materials to delivery of finished product to the end customer.

Sea transports

See previous page.

Terminal operation

TransAtlantic operates ports in Sweden, Poland and the UK . At our ports and terminals we have gathered our many years of experience in shipping, port and stevedoring, clearance, customs documentation, contract work, cargo handling, logistics, haulage, railways, agency activities and ship brokerage. All this to add value for the customer.

Distribution

TransAtlantic has an extensive network and partnerships enabling swift and efficient distribution services via truck, train or barge.

IT and information systems

Our coordinated IT-system is vital component part of our integrated logistics. By reading and identifying barcodes, this support system is able to monitor the location of each individual goods item in the logistics chain and when it is estimated to reach the end customer. The customer has the option of following the movement of the goods by computer. Similar systems have been in use previously for land shipments but are infrequent in combination with industrial maritime transport. These systems are up and running at some of our business units and are planned to be used by the other units.

TransAtlantic Industrial Shipping:

The company in brief

Geographic area:	Focus on The Baltic Sea, The North Sea & Mediterranean
Customers:	Primarily the forest and steel industry in the Baltic Sea area and the basic industries in the Nordic region
Resources:	About 50 vessels with and committed crew – ashore co-workers in 7 countries working in terminals, offices and ports.
Turnover:	SEK 3 billion (2011)

What we deliver:

Competitiveness & reliability

We create added value for our customers through:

- Effective transport systems
- Door-to-door with just one contact through different transport concepts
- Safe and punctual transportation
- Environmental care
